QR Code Link to This Post Pros: 34,000 miles, mild rebuild, NEW Summit 600 cfm carburetor, tires have 70% tread, 35" tires, all lights work, heavy duty headlight harness installed, 4wd works, NEW fuel pump/sending unit, new front gas tank, new fuel filter, rubber hose fuel line so you can put any 4bbl carb you want on easy, VERY little rust, one small dent on drivers side front quarter panel that can be pulled out, new valve covers/ gaskets, edlebrock performer 460 intake manifold, electric choke,

Cons: battery is toast, 4 low won't engage (needs to be adjusted), windshield has crack on passenger side, no radio (*but I have one to go with it), headache rack and light bar does not come with it, temp gauge doesn't work properly(but motor doesn't overheat), key has to stay in ignition (I have keys to lock it) driver side window doesn't always stay up while driving it (needs new regulator cheap fix) Steering wheel has some play to it, heater works very well but A/C doesn't blow cold, seat could use a cover

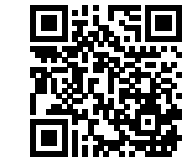

* I Have a nice topper for it but it's in Alberton at a family members- If you would really want it we can work out details to get it.

Over all this truck runs solid and doesn't smoke, It was my daily driver for about a year on Highway conditions.
