QR Code Link to This Post My client is looking for a Network Enterprise Manager for their location in Oshkosh, WI. This is a Full Time position offering salary depends on Experience

Responsibility:

- Manage and maintain WAN hardware and software across all facilities to ensure reliable communications network necessary to support business requirements.
- Be responsible for network backup and recovery plans.
- Provide hardware and software support for all PC, desktop, laptop, servers, and wireless devices, including ITEL and Mac environments.
- Manage and prioritize workload for Technical Support Specialists to ensure timely completion of projects that meet departmental goals and objectives (this includes management of consultants and vendors when utilized).
- Install, configure, and maintain organizations network, Email servers, data storage and firewalls as well as management and support of VOIP telephone switches.
- Develop and maintain standards for hardware and software support.
- Evaluate current infrastructure and recommend "best practices" improvements.
- Keep abreast of new technology developments and make recommendations regarding changes to current standards as appropriate.
- Manage sever and network security, backup and recovery, and operating system updates to ensure reliability and minimize downtime.
- Manage/audit software licensing to ensure compliance.
- Maintain accurate computer hardware and software inventory records.
- Provide tactical and strategic input on overall network planning and related projects.

Requirement

- Bachelor's degree in Computer Science, Information Systems, or related discipline.
- 5+ years of experience of providing and increasing the reliability and availability of networking technologies, network operation, and Windows based applications and servers.
- 3+ years of experience with Cisco switches, routers and firewalls.
- 3+ years of experience with Active Directory and Exchange servers.
- 5+ years of experience with network engineering (routing, VLANs, security, and system design).
- Certification with Cisco or Microsoft a plus.
- Excellent verbal and written communication skills with the ability to manage people effectively.
- Must be a team player.
- Strong project management skills.
- Must have excellent analytical problem identification and resolution skills.
- Ability to coordinate with other departments to maintain optimal system availability.
