QR Code Link to This Post Hello folks, my name is Tom Martin and I would like to introduce my game Decoding the Powerball. For the Powerball lottery, there are 69 white ball numbers and 26 Red ball numbers.

How it's played is; The Powerball lottery draws 5 white balls and 1 red ball. If you match all 6 numbers then you win the jackpot. This drawing it's 177 million. If no one wins the Jackpot grows higher and higher.

BUT, there are lower prizes too. If you correctly match just the 5 white ball numbers the prize is 1 million and that never changes. So you always have a chance of winning a million dollars from drawing to drawing.

My game concentrates on just the white ball numbers, I really don't care about the red ball.

Again there are 69 white ball numbers and there are only 5 numbers that can come up winners. So, my thought process is it should be easier to pick the numbers that WON'T be coming up, then the 5 that actually do.

So, I keep a track record of groups of numbers, some large groups, some small groups and when I feel a group of numbers WON'T be coming in the Powerball lottery.

I eliminate them and if I'm correct in my pick, then I just reduced my odds by a small amount and I'm one step closer to winning that MILLION dollar prize.

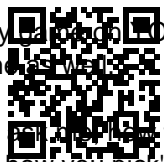

I have been putting my picks on YOUTUBE.

So, If you like to see what this all about, Please watch my video ****copy and paste****[<https://youtu.be/tUVJcJIEh0w>] ******

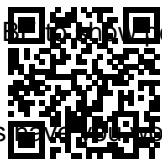

[illegible]

look at my game the same way I look at horse racing. When I go to the horse racing track, I don't know anything about these horses. So, I buy information through newspapers or flyers to give me a clue on what horses I want to bet on.

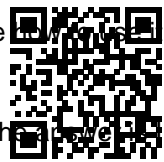

believe my game will give you information to help you make your best guess possible. OK, so just because I buy information on horses, will that guarantee me that I'll pick winners? NO. I won't and of course I can't GUARANTEE any winnings for you either BUT if you like picking your own numbers and not just taking an easy pick, then
