Specializing in Comfortable and Efficient User Interfaces: Beyond User Friendly! As an MS Access database developer with a background in business operations management and over eighteen years experience designing and implementing relational databases in Microsoft Access, for wide variety of businesses, institutions, schools and non-profit organizations, I specialize in designing applications which professionals and "non-computer specialists" can understand and find easy to use. I enjoy the collaborative process and rely on good interpersonal communication to design applications appropriately suited to the task at hand. I strive for elegant simplicity. I also conduct individualized, on-site instruction in Access, and can add new functionality to existing databases. I would welcome the opportunity to design or refurbish a database for your business. I am local to the North San Francisco Bay area of California and provide in-person Access database design, development and support to San Rafael, Petaluma, San Anselmo, Sausalito, Mill Valley, Berkeley, San Jose, San Francisco and surrounding areas in Marin County and Sonoma County. I also work with organizations remotely throughout the United States. Please feel free to contact me to discuss your project ideas! Jacob Barnett
