QR Code Link to This Post 4.7l V8 automatic transmission with trailer package.

Within the last 2 years the A/C evap., water pump, back sliding window (broken) and brakes were repaired.

The last owner replaced the rims, so no pressure transmitters (no big thing to me, but does give pressure error).

The front windshield is cracked. The engine has a low idle miss. My mechanic replaced all spark plugs, a couple of coils and wires, checked fuel injectors and cannot find out why the miss. The MPG has not changed and cannot feel the miss at speed...

Second mechanic cannot find out why the miss. Other than that the truck runs great! Mostly highway.
