QR Code Link to This Post Archer was rescued from a backyard breeder at 6 weeks old and placed into a foster home. It was soon apparent that he had issues with his GI tract: he had roundworms, coccidia, and giardia. He was treated for all these parasites, and his diarrhea resolved but he would still vomit every time he ate. He had a great appetite, but was not gaining any weight - his littermate was double his size! We had some X-Rays taken of his esophagus and he was diagnosed with a persistent right aortic arch (PRAA), basically a remnant from when he was in his mother's womb. There is a band of tissue pushing on his esophagus, making it difficult for food to pass through. He needs to get a CT scan and surgery to repair this issue before it affects him long term. Please consider helping this little guy out!

Please visit his Youcaring page for continued updates. He is scheduled for surgery on 11/1/17 and we have a long way to go to cover the cost!
