QR Code Link to This Post Lawn Mowing

Longer grass fairs better in the heat of the summer and requires less water to thrive. Our general cutting height is 3", but that can be adjusted upward or downward depending on personal preference and the time of season. Mulching the grass returns organic nutrients to the soil and provides for a healthier and fuller turf. This is our preference and philosophy for optimum lawn quality. The cut grass can also be caught and removed from site depending on owner preference.

We welcome new customers up to the end of April, at which time our mowing schedule is set for the season. If you miss this window feel free to sign up for next year. We do not perform any one-time mowing services, sorry for any inconvenience.
