QR Code Link to This Post Let your Vet treat your Pet, Let Certified Pest Control treat your Home

If left unchecked, a handful of fleas can quickly turn into hundreds and become a major headache for homeowners. An adult flea usually remains attached to its host. However its eggs drop off the animal and end up in pet bedding, furniture and carpeting. A single adult can produce between 40 and 50 eggs in a day.

That explains why just treating your pet for fleas will not completely solve the problem in your home.

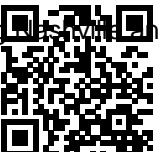

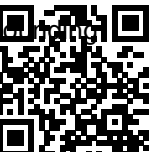

Certified Pest Control, LLC
CHARTER # 5155
