Comments: Every single battery sold is tested thoroughly at-least 8 times on a computer, and then road tested in our test vehicle to make sure the battery system is well calibrated.

The most updated rebuilt "standard" batteries must meet minimum specs such as heat generated, internal resistance, complete balanced battery, output capacity produced at low amperage, output capacity produced at high amperage, input capacity consuming

Also ask about our 6kwhr or 8kwhr lithium upgrade battery system that replaces the factory system has 20-40 miles of ev range and gets 150mpg in ev mode and 100mpg in phev mode

lithium conversions start at \$3800 includes lithium battery, all redesigned case, battery charger, programming computer these are manufactured in japan

When a battery is officially dead, it has trouble starting, A80 or A90, depends on battery age and mileage (mileage), but it's not a good ability due to other factors. Frequency of charging, length of time it's been in the sun, to calculate how long it will last, but it's not a good ability due to other factors. It has been in the sun, private Prius, second hand Prius (2004/2005) is prone to battery failure. The point is, it's not a good ability due to other factors. depends on cooling system operation; checkups for private vehicles in our 60k/120k mile service.

As for private-owned gen 2008/2009 Prius, we've seen a couple 2004/2005 Prius out of warranty (5 years) and they seem currently as good as new. repair, a 2008/2009 Prius, Honda Civic, other hybrid battery rebuild service 650
