QR Code Link to This Post Experienced Tutor in Math, Physics and Computer Science Serving Amherst, Brookline, Manchester, Milford, Nashua, Wilton and most Southern New Hampshire communities Finding the Right Math Tutor Let's face it finding a good math tutor for yourself or your child can be daunting. What qualities do you look for in finding the right math tutor? Experience, certification and cost cannot guarantee the tutor will be suitable for your needs. Also, professional tutoring services cannot guarantee success. Many of them charge high costs but pay the tutor very little in return. Another consideration is the tutor doing this because he or she is between jobs or desperate for some modest income? So, now what? What should you look for in a good math tutor? A sensible thing to do is to call the tutor and speak with him or her. Try to assess their motivation and most importantly, their enthusiasm. See if the tutor is interested in tutoring or if this is just a job to pay the bills. Ask to find out if he or she will work with your child's teacher to determine where your child is having difficulties. Most importantly, ask if you will be charged if the lesson goes over by 15 or 20 minutes. In short, try to determine if the tutor is willing to go the extra mile to help your child succeed. Also, don't pay over \$35.00 per hour for a tutor. This may be a telltale sign that the tutor is tutoring for the money and not really caring about you or your child's success. What I Can Offer I am willing to particularize and customize to the level of your needs. Students prefer such individual instruction because it allows them to learn at their own pace without the pressure of peers or authorities. Parents, eager for their children to succeed, realize their children often need more personalized attention than they can get in a classroom. With a Master of Science Degree in Mathematics, over 25 years as a software engineer and over 15 years teaching experience at the college and university levels in areas of mathematics and computer science, I believe to have the necessary skills to provide the quality you expect. Since I am not affiliated with any professional tutoring services, I can be more flexible in scheduling and delivering quality tutoring. Typical Subjects Although not an exhaustive list, here are some of the more popular topics I have recently tutored or am tutoring: Mathematics and Physics: Algebra Calculus Pre-Calculus Trigonometry Technical Math Basic Arithmetic Algebra based Physics Computer Science: C Programming C# Programming C++ Programming HTML and JavaScript Or customize your own tutoring requirements. Rates I try to keep my rates as reasonable as possible. Below is a general guideline: \$20 per hour - in house \$25 per hour - your place

15 mile radius from Brookline, NH \$35 per hour - your place

16 to 25 mile radius from Brookline, NH Distances are approximations. Homework and Research Projects Quite often I had students that did not need formal tutoring, but were stuck on a particular homework assignment. For example, not understanding how to solve a particular problem or how one step led to another. Sometimes

Intermediate steps where not provided or how they are related to the over all solution. Additionally, I had those in industry that required assistance or advice on writing software or programs for their own websites, research projects, or their active research. I am quite popular. I decided to write this on my own time post. I really like the problem or request is emailed to me with a short email as possible. I provide a due date for the task. The completed work is sent on or before date, or as late as possible with a note. If the request cannot be completed by the due date, then the task may not be completed by the due date. In such circumstances, an additional note is provided on how best to solve the problem. The research project or task request is not a work problem. The typical charge is usually \$1000 per problem, depending on the complexity of the problem and due date. If the request requires research as in writing code for industry or a private person, then I generally negotiate a fair price. In the past, this service has worked quite well for students studying on a particular homework problem or in understanding a particular topic. It has also benefited industry that need a fast turn around time in solving or implementing a software requirement. Maybe Tutoring is Not For You. Maybe you are interested to the solution of a particular homework problem or doing research and need assistance. Obviously tutoring may not be for you. I realize there may programs available on the Internet to assist but I have found they are difficult to use, slow, have inaccurate results or crash your web browser. With over twenty five years experience as a software engineer at various levels, I decided to post software applications that might find useful on my website. These programs cover topics from Biology, Finance, Engineering, in Physics and Mathematics. Send an email and I will provide a link to my website where you can find these helpful software applications. For More Information If you have

any questions or comments about this posting or myself, send an email and I will reply as soon as possible with the requested information. Special Thank You I would like to take this opportunity to thank all those I have helped in the past. I appreciate the numerous comments received and found them quite informative. Some helped improve my tutoring style, others requested additional software applications be available or tips in improving my website. One thing I learned is that no one is perfect. Thank you for your interest and I hope you found this posting helpful. I wish you the best in finding the right math tutor for yourself or child. So there you have it;!
