QR Code Link to This Post Project vehicle. Runs and drives battery is good. Tires are weather checked. The body works was my first time an the paint is rattle can basically it was just to see how the idea of newer jeep color looked on it. If a person really wanted to do it right for \$5000 you can get a complete new body. Full restoration go for up to 50 an 60 thousands. A set of big tires an good running condition they pull 10 pretty easy. When I got it it only ran if you poured gas in the carb so I replaced fuel pump an it runs but cold blooded. Figured it needed a carb kit next. Seems I wasn't the only one that thought that after buying a pump an putting it in I found a new one with a carb kit in the center council. Top comes off window folds down so it is a summer an winter toy. \$6900 obo would entertain thoughts of.
