The new USDT Flash App—powered by USDT Flash Software technology—lets you create huge USDT balances, transfer them anywhere, and keep them live for up to 365 days, all without spending real coins or waiting for gas fees.

Instead of pushing every trade through slow blockchain confirmations, you click Flash and see up to 500 million USDT land in Trust Wallet, MetaMask, Exodus, SafePal, or Binance Wallet in under three seconds. The balance behaves like normal USDT, so you can send it to friends, split it for payroll tests, or demo proof-of-funds on Zoom calls. By choosing ERC-20 or the quicker FLASH USDT TRC20 path, you decide which network your flash appears on; the twin engine automatically fails over if one path is congested.
